

# TYPE 3 PLASTICS

## POLYVINYL CHLORIDE (PVC OR V)

(Not recyclable in our county)

Soft, flexible plastic used to make clear plastic . Also used for plumbing type parts and garden hoses. It is dubbed "poison plastic" because of the numerous toxins that leach throughout their life cycle.

Choosing products at the store that do not have type 3 plastic is a great way at reducing your plastic waste. Go for glass or reusable options.

**Plastic Wrap**

**Cooking Oil**

**Teething Toys**

**Reusable Covers and more alternatives [HERE](#)**

**Buy glass when available or go to a local store that sells oils.**

**Teething pain can be helped with a wet washcloth rolled and placed in the freezer.**
